

Elevate

your water cooler conversation.

Innovators are often defined by their ability to recognize extraordinary potential in seemingly ordinary circumstances.

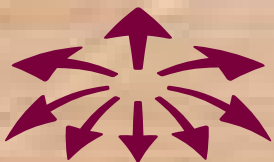

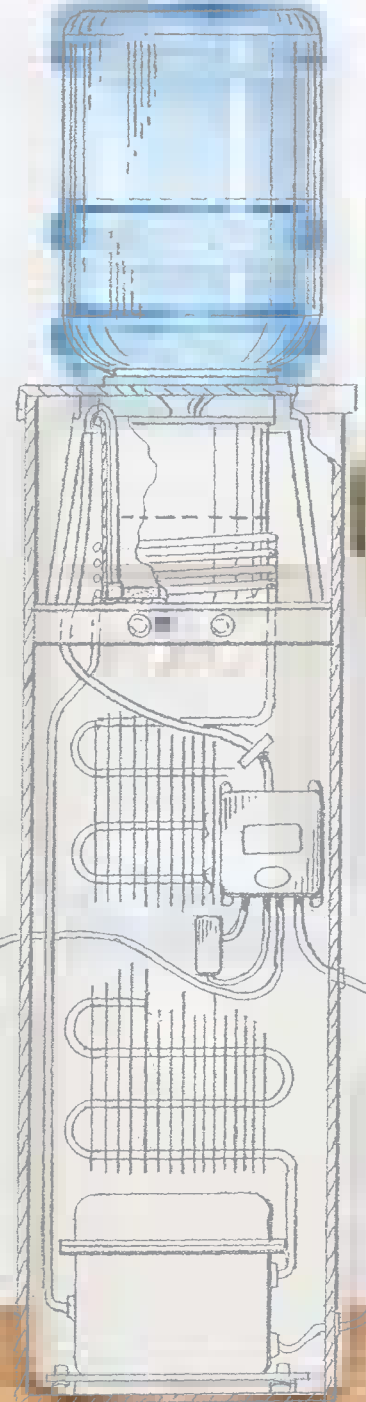

At McMaster Innovation Park, 37 acres of Brownfield has been re-envisioned into a facility where individuals and organizations engaged in the business of innovation will share more than one million square feet of laboratories, offices, teaching-training space and conference facilities, as well as a fitness centre, a food court and a long-stay hotel.

The benefits for pioneering enterprises cross-pollinating with other visionaries in similar fields are immeasurable. Those who choose the McMaster Innovation Park will have unprecedented access to world-class researchers, proximity to a highly trained labour pool and an address that will help them to create a better world.

We're building (to LEEDs certified or better) a dedicated research centre of excellence for Life Sciences. McMaster Innovation Park, with our government and industry partners, aspires to become a location of choice for Biotechnology and Nanotechnology enterprise.

Contact us today to share your vision and be a part of ours.
